# MP2110A

## Multi-channel Optical Module, Device Manufacturing and Development

Data traffic continues growing year after year and the optical communications market is expanding rapidly with the proliferation of AI. This is driving adoption of high-speed transmission standards such as 800G and 1.6T, creating demand for test instruments capable of evaluating signals in cutting-edge 200G/lane optical modules. At the same time, there is constant pressure to cut costs for these optical modules, making improved productivity and cost reduction critical challenges.

The MP2110A is an all-in-one instrument with built-in sampling oscilloscope (Eye pattern analysis) and BERT (Bit Error Rate Tester) designed for manufacturing and development inspection of 10G to 1.6T optical modules.

It increases line productivity and cuts costs.

### All In One

All-in-one 4ch sampling oscilloscope + 4ch 25G BERT  
There is a built-in Clock Recovery Unit for Sampling Oscilloscope

### High Speed

The high-speed sampling oscilloscope.  
Measurement times are slashed by measuring four channels in parallel.  
Built-in PC for Stable Operation

### Low Cost

Customized test systems can be configured as necessary by combining options freely.

### Low Noise

The high-sensitivity sampling oscilloscope supports accurate performance even for PAM4 signals with a closed Eye opening, and for optical signals attenuated by optical switches, etc.

### NRZ/PAM4 Analysis

Easy, fast and high-sensitivity, and reliable PAM4 TDECQ Measurement

### Supported Applications: Evaluation of physical-layer performance for 10G/25G/50G/100G/200G/400G/800G/1.6T optical transport modules, optical cables, and associated parts used by data centers, Core/Metro networks, mobile network

Transmission Paths: Ethernet, InfiniBand, Fibre Channel, CPRI/eCPRI, SDH/SONET, OTN

Optical Transceiver Modules: SFP, QSFP, CFP, OSFP, QSFP-DD

Cables: Active Optical Cables (AOC), Direct Attach Cables (DAC)

Devices: TOSA, ROSA, High-Speed Optical Engine, PHY, Driver ICs, CPO

# Configuring Efficient Measurement System: Integrated BERT and Sampling Oscilloscope

Previous measurement systems were extremely complex due to the need for a separate BERT as the signal source and a sampling oscilloscope for eye pattern analysis. Incorporating a BERT and 40 GHz sampling oscilloscope into the All-in-one BERTWave MP2110A greatly simplifies measurement system configuration.

Installing the BERT and sampling-oscilloscope options for up to 4ch in one unit makes it easy to implement simultaneous TRx measurements of optical modules, such as multichannel QSFP, and devices using an easily configured and controlled measurement system. This helps cut growing measurement times as the number of channels increases with development of multichannel optical modules and devices.

With a BERT and sampling oscilloscope in one box, measurement results can be captured all at once along with simultaneous Eye pattern display. As a result, all the measurement results needed to evaluate multi-channel optical modules and devices can be seen at a glance, reducing measurement times by large margins.

BER measurement results (left) and Eye Pattern analysis results (right) are displayed simultaneously.

Simply setting one channel of the MP2110A sets all channels simultaneously.

Operation is easy with simple settings and user interface. Remote commands are backwards-compatible with all BERTWave series, such as the MP2100B, facilitating instrument upgrades.

# Configuring Efficient Measurement System: Supports both Simultaneous Measurement of All Channels and Parallel Measurement

As well as all-at-once simultaneous measurement of all channels using the sampling oscilloscope and BERT, individual channels can be measured separately. An evaluation system matching the application can be configured easily because both multichannel modules and multiple single-channel modules can be measured all at once.

Simultaneous All-Channel Measurement

All-at-once test of quad-lane module using simultaneous measurement of all channels

Shorter test times increase throughput

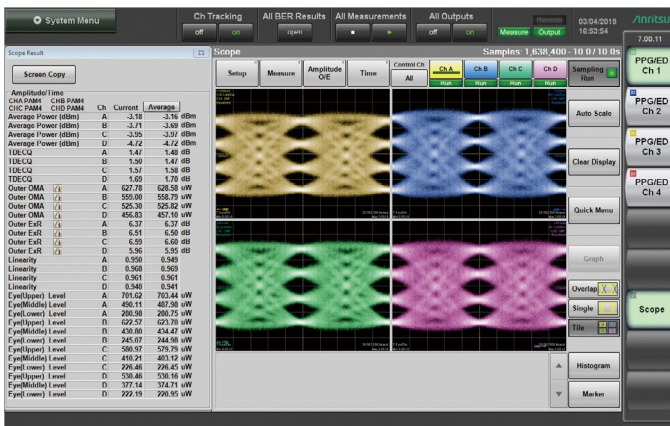

Parallel-Channel Measurement

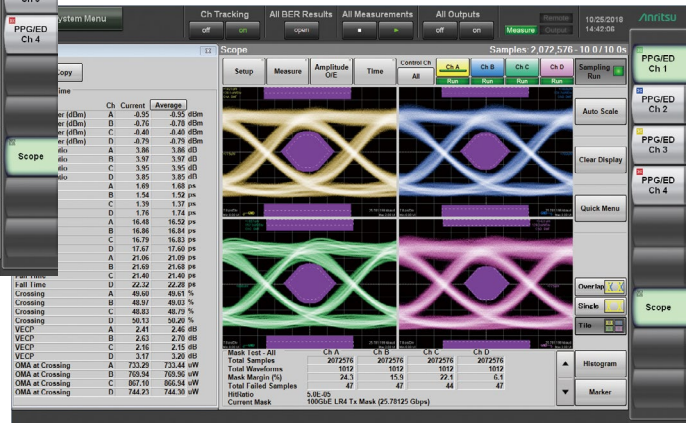

Parallel test of four single-lane modules using separate measurement of each channel

Reduced cost per channel cuts capital investment

Supports both simultaneous and parallel test methods

4ch PAM4 TDECQ Measurement

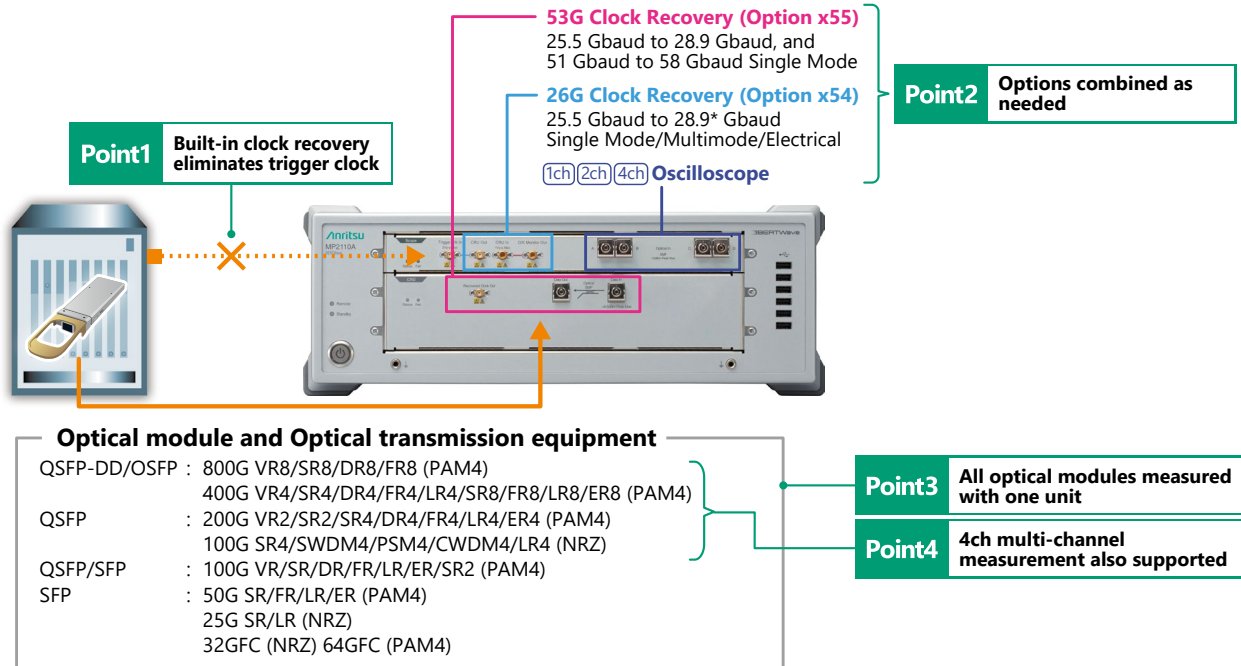

4ch NRZ Mask Margin Measurement

Supports both NRZ and PAM4

# Configuring Efficient Measurement System: Built-in Clock Recovery

## Accommodates Built-in NRZ/PAM4 Clock Recovery Unit (CRU)

Sampling oscilloscopes for signal waveform quality evaluation require a separate trigger clock signal synchronized with the data signal, but transmission equipment with built-in optical modules and optical modules outputting PAM4 signals sometimes do not have a trigger signal. In this case, the trigger signal is generated from the data signal using clock recovery. This optional Clock Recovery Unit (CRU) can be installed in the MP2110A Sampling Oscilloscope.

\*: Requires Option x59 with Option x54 when using 28.2 Gbaud to 28.9 Gbaud.

MP2110A Optical Module Measurement Solution using Clock Recovery Options

## Excellent Operability at Lower Cost

Since this clock recovery is built-in, it offers excellent operability at a lower price. The space-saving design and reduced need for complex cable connections as well as the easy-to-use settings help cut initial capital costs.

## Wide Range of High-Performance Applications

The following clock recovery unit options are available:

- Option x55: Supports 25.5 Gbaud to 28.9 Gbaud & 51 Gbaud to 58 Gbaud single mode
- Option x54: Supports 25.5 Gbaud to 28.9 Gbaud single mode/multimode/electrical

These options can be combined freely to configure a flexible test system matching the site requirements at optimum cost. When all options are installed, various types of optical modules can be evaluated without a trigger clock using one MP2110A unit.

In addition, combination with a 4ch oscilloscope supports all-at-once measurement using the recovered trigger signal to help cut evaluation times for multichannel optical modules.

## High Performance

When using high-sensitivity modules, the impact of insertion loss on the data waveform is minimized by optimizing internal division ratios, demonstrating its usefulness when monitoring signal waveforms requiring high sensitivity. Additionally, there is no waveform degradation due to multimode splitting because Option x54 performs signal splitting for input to the CRU and oscilloscope using electrical signals after O/E conversion.

\*: Waveform comparison at -2 dBm input

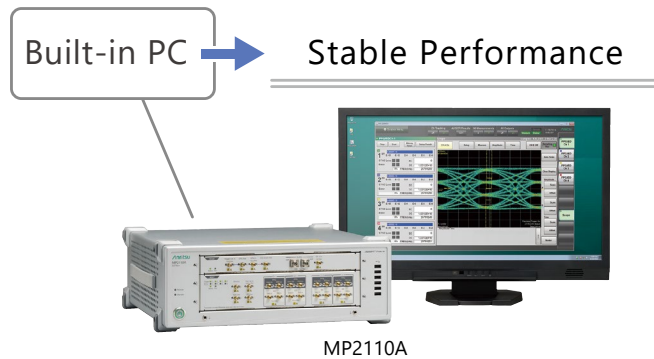

## Fast and Stable Measurement Performance

The MP2110A support high-speed sampling at up to 250 ksamples/s. Measurement of 1 million samples at a symbol rate of 53 Gbaud requires only about 5 seconds to complete or about 7 seconds at 100 Gbaud. This cuts pattern analysis time by about 65% compared to conventional test instruments.

Additionally, the Option x8x with the Fast Sampling (Option x69) cut TDECQ analysis times by about 30%.

The MP2110A requires no external Windows PC controller, because it has a built-in PC for measurement processing. It supports high-speed processing irrespective of external PC controller specifications.

## More Accurate Performance Confirmation: Sampling Oscilloscope Performance

### Sampling Oscilloscope Functions

The MP2110A sampling oscilloscope has all the performance necessary for measuring optical modules such as 10G to 1.6T, and optical devices used by optical modules.

The low-noise and high-sensitivity O/E plus low-jitter trigger support more accurate measurements of narrow Eye openings of PAM4 signals as well as attenuated signals passing through optical switches, etc., helping improve production-line yields.

In comparison to conventional instruments, the wideband O/E draws accurate patterns of the characteristics of directly driven optical signals and optical modules for long-distance transmissions.

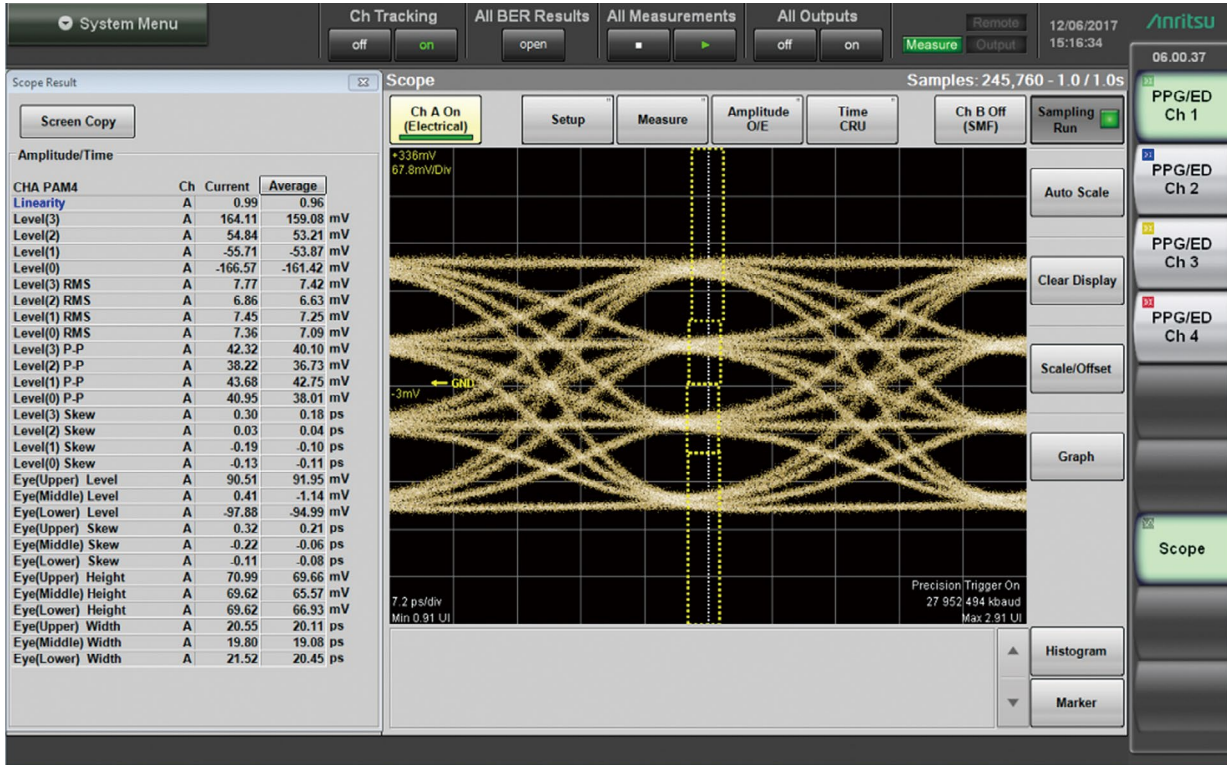

\* Estimated optical power when Mask Margin (Hit Count 0) reaches 0% (calculated from optical noise)

# Full Range of Measurement Functions (Sampling Oscilloscope)

Sampling oscilloscope supports both NRZ and PAM4 analysis.

Selection of displays for up to 32 measurement items supports confirmation of multiple PAM measurement results at one screen. Additionally, all measurement results, including items not displayed on-screen, can be captured simultaneously using remote control.

# Full Range of Measurement Functions (Sampling Oscilloscope)

## NRZ Mask Margin Measurement

Testing is simple because Mask Margin tests are performed automatically. Furthermore, since the time required for Mask Margin tests is only about 1 second, line productivity is improved because standards-compliant measurements are performed at high speed in a shorter time.

- Automatic measurement within 1 second
- Real-time margin measurements
- Selectable Count and Rate at Mask Hit

## PAM4 TDECQ Measurement (Option x95/x63)

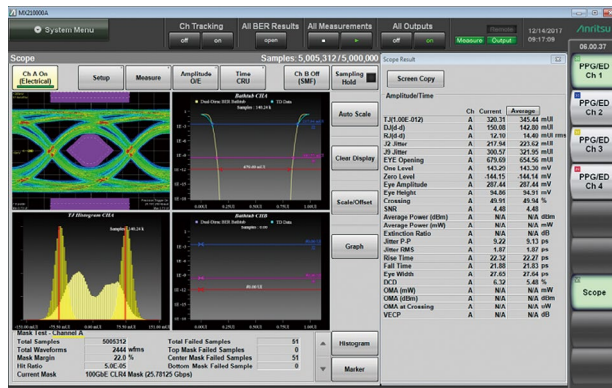

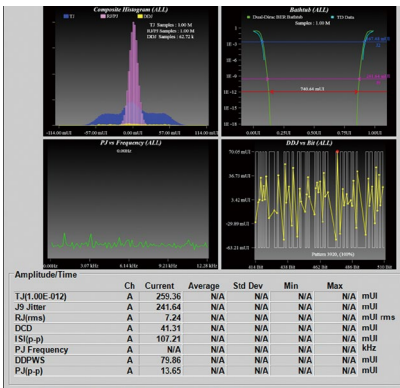

Easy capture of measurement results without complex settings. The low-noise high-sensitivity oscilloscope supports high-reproducibility measurement of even small Eye margin PAM4 signals.

## NRZ Jitter Analysis (Option x96)

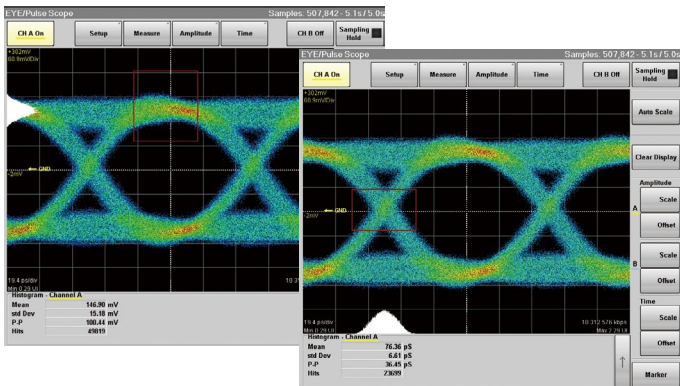

This option supports separate analysis of Jitter components such as TJ, DJ, RJ, etc., with display in various graph formats.

- Fast, easy J2/J9/etc. measurements for manufacturing inspections (Eye Mode)
- Detailed analyses for DJ (Advanced Jitter Mode)
- Simultaneous Jitter Analysis and Eye Mask tests help cut measurement times

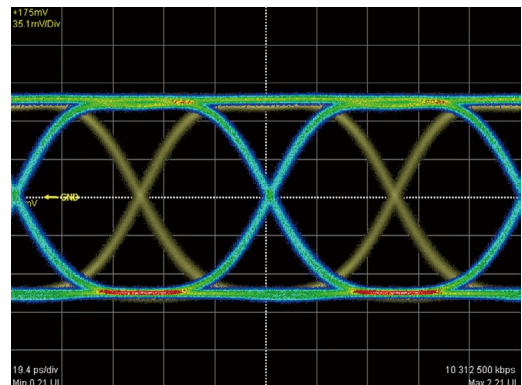

## Histogram Measurement

Troubleshooting is made easier because waveform data component analysis can be performed using the mean, standard error, and scatter within the set data distribution.

## Reference Trace Function

Saving measured waveform data for reference enables comparison of current data with previous data.

## More Accurate Performance Confirmation: BERT Performance

### Wideband Operation Frequency

In the standard configuration, the MP2110A BERT operates at bit rates of 24.3 Gbit/s to 28.2 Gbit/s. This range can be extended optionally to support bit rates of 9.5 Gbit/s to 14.2 Gbit/s, enabling use for various applications including 10 GbE and 100 GbE.

PPG/ED Supported Bit Rates	Application Example
24.3 Gbit/s to 28.2 Gbit/s	32G Fibre Channel, CPRI (Option 10), InfiniBand EDR, 100 GbE, 100 GbE FEC, OTU4
9.5 Gbit/s to 14.2 Gbit/s (Option x93)	InfiniBand FDR/QDR, Fibre Channel (16G, 10G, 10G FEC), 10 GbE (WAN, LAN), 40 GbE (4 × 10 Gbit/s), CPRI (Option 8, 9), OC-192/STM-64, OC-192/STM-64 FEC (G.975), OTU1e, OTU2, OTU2e

### Excellent PPG/ED Performance

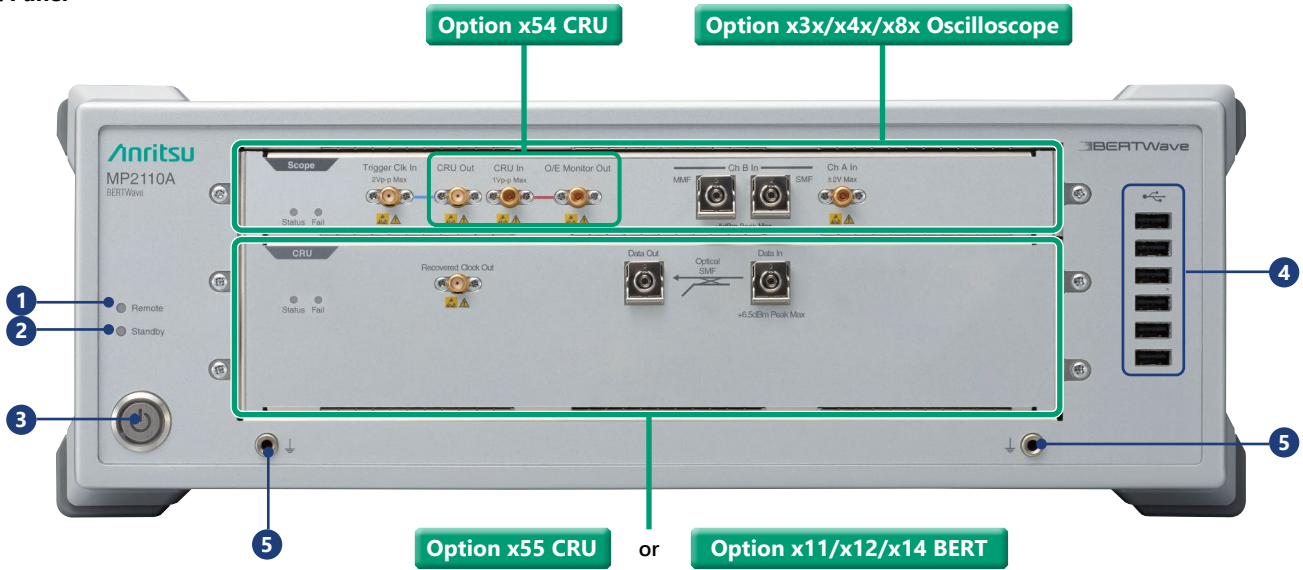

The MP2110A PPG has a low data jitter of 600 fs rms (typ.) for accurate measurement of the characteristics of optical modules, optical devices, etc. Additionally, the 25 mV (typ.) ED supports BER measurement of low-amplitude signals resulting from transmission path losses, helping improve DUT yields.

### Active Optical Cables (AOC)/Direct Attach Cables (DAC) Evaluation

#### Required Test Items

- 4ch Simultaneous BER Measurement (Crosstalk Test)
- Differential Electrical Signal Eye Pattern Analysis
- Differential Electrical Signal Jitter Analysis

### NRZ/PAM4 Differential Electrical Signal Evaluation

The Eye pattern of differential electrical signals can be analyzed using the Differential Electrical Channel Oscilloscope (Option x21) and Signal Processing Option (Option x98).

- A standards-compliant band filter and equalizer, such as CTLE, can be applied.
- The measurement system, such as cables, can be calibrated using the De-embedding function.

Additionally, installing the Clock Recovery Unit (CRU, Option x54) eliminates the need to provide a trigger signal.

## MP2110A Selection Guide

The MP2110A accommodates various module options in its top and bottom slots, supporting customized performance choices at purchase. Choose your preferred options from the following list.

### Scope Selections

Scope options are installed in the MP2110A top slot. There are various options with different channel number and performance. Choose one from the following table.

Option	Option x80/x84/x85 + x01 + x62*1	Option x40 + x61	Option x45	Option x42	Option x43	Option x21
Number of Electrical Channels	—	—	—	—	1	2
Number of Optical Channels	4 (x80), 2 (x84), 1 (x85)	4	1	2	1	—
Hardware Bandwidth	60 GHz	35 GHz		25/35 GHz*2		
Supported Data Rates	0.5 Gbaud to 120 Gbaud	0.1 Gbaud to 60 Gbaud		0.1 Gbaud to 60 Gbaud		
Reference Receiver	120 Gbaud	✓	—	—		
	53 Gbaud	✓	✓	✓ (at 35 GHz selection*2)		
	26 Gbaud	—	✓	✓		
Fiber Input	9 μm	62.5 μm		62.5 μm		
Wavelength Range	1260 nm to 1650 nm	850 nm to 1650 nm		800 nm to 860 nm (at 25 GHz selection*2) 850 nm to 1650 nm (at 35 GHz selection*2)		
RMS Optical Noise	850 nm	—	12.2 μW*4	7.0 μW*5 (at 25 GHz selection*2) 12.2 μW*4 (at 35 GHz selection*2)		
	1310 nm	12.8 μW*3	4.1 μW*5	4.1 μW*5		

\*1: Requires x01 and x62 additions when ordering x80/x84/x85.

\*2: Select 25 GHz or 35 GHz when using. 'MMF' is printed on the 25 GHz channel connector, and 'SMF' is printed on the 35 GHz channel connector.

\*3: When using No Filter.

\*4: When using 19.34 GHz Filter.

\*5: When using 21 GHz Filter

The high-accuracy trigger function (Option x24) can be added to single-channel and dual-channel scopes (but not to quad-channel scopes).

### Scope Software Additions

Adding software functions to the installed scope requires addition of the appropriate option license. Options to enable functions differ according to the installed scope option. Choose from the following table.

Option	Optical Channel		Electrical Channel
	x8x	x3x/x4x*	
Fast Pattern Lock Mode Pattern Capture	x62 (required)	x95 or x98	x95 or x98
Digital Filter Embedding/De-embedding			x98
RIN OMA			—
High-Speed Sampling	x69	—	—
CTLE	—	x98	x98
PAM4 Analysis TDECQ Equalizer	x63	x95	x98 + x95
Advanced Jitter Mode NRZ Jitter Analysis	—	x96	x96

### CRU Additions

There are two CRU options as follows.

- Option x54 (25.5 to 28.9G CRU): Can add to scope options x2x/x3x/x4x (but not to x8x). To extend the CRU upper limit from 28.2 Gbaud to 28.9 Gbaud, add Option x59.
- Option x55 (25.5 to 28.9/51 to 58G CRU): Install in MP2110A bottom slot. This option can be added even if there is no scope.

### BERT Additions

The BERT can be installed in the MP2110A bottom slot under the following conditions.

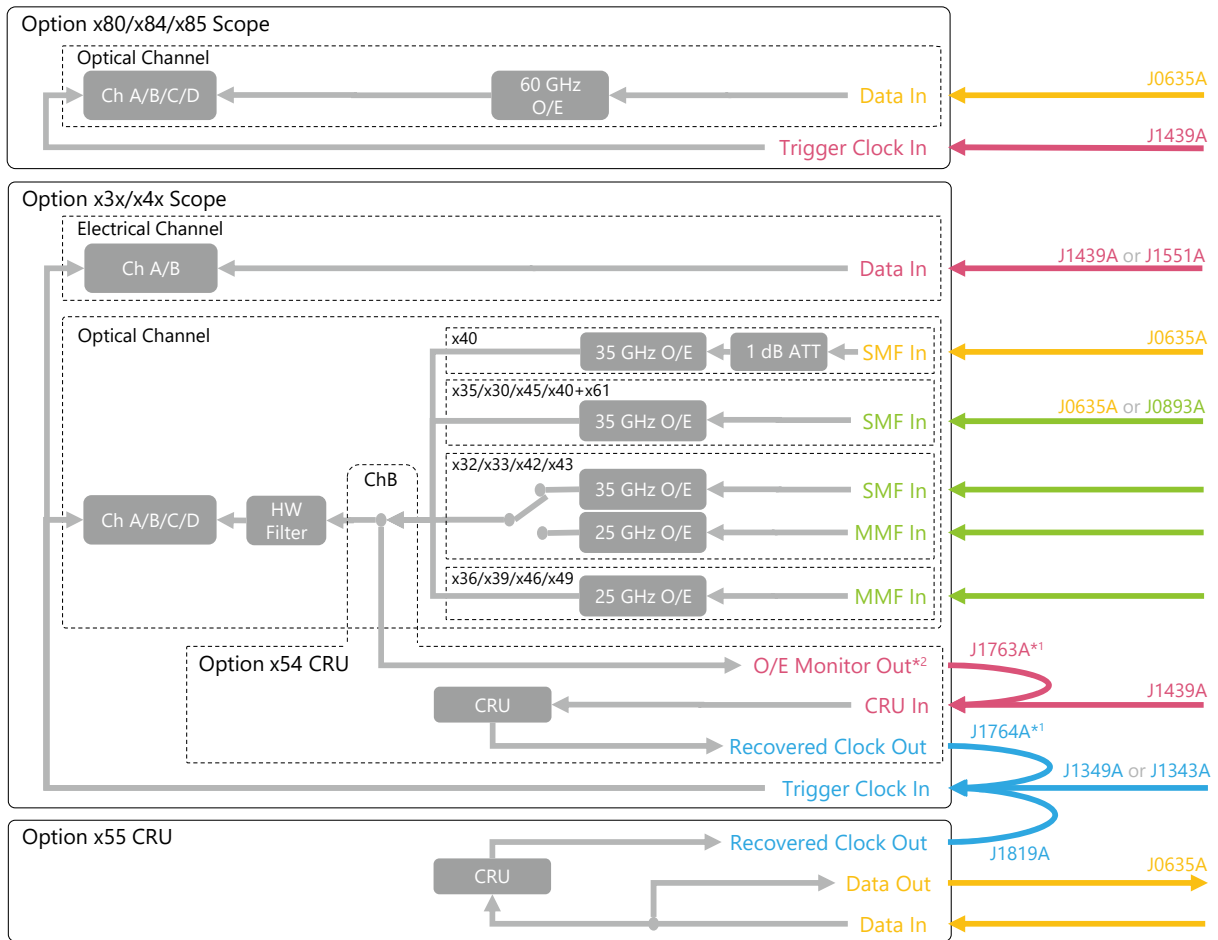

- Scope Option x8x not installed in top slot
- CRU Option x55 not installed in bottom slot

Choose Option x11 for one channel, Option x12 for two channels, and Option x14 for four channels.

Add Option x93 when using rates from 9.5 Gbit/s to 14.2 Gbit/s.

- Optical cable SMF
- Optical cable SMF or MMF

\*1: Standard accessory

\*2: The system recovers the clock from the optical signal input to ChB for optical channels. There is no O/E Monitor Out terminal for electrical channels. Use a Pick-off tee (J1510A) to split the signal and input it to CRU In. For differential channels, add another Pick-off tee to the other channel and attach a coaxial terminator (J1632A) to the branch.

Refer to the selection guide (p. 21) when placing a new order.

Option numbers 0xx indicate factory installation at shipment, 1xx indicate post-delivery installation after delivery, and 3xx indicate user installation.

- \*1: BERT retrofit supported when BERT not installed or to increase number of channels
- \*2: Oscilloscope retrofit supported when oscilloscope not installed or when changing Option x3x and x4x, same channel configuration.
- \*3: This option upgrades MP2110A units with Windows Embedded Standard 7 installed to Windows10 Enterprise LTSC.
- \*4: Option x55 can be retrofitted when the BERT is not installed.
- \*5: If Option x54 is already installed, option 159/359 can be ordered for serial numbers 6262201559 or larger.
- \*6: Option 395 can be ordered for serial numbers 6261844875 or larger.
- \*7: Option 398 can be ordered only for optical-channel configurations, or for serial numbers 6272280900 or larger.

Scope Options x2, x3x, and x4x have different reference receiver characteristics (Bessel filter approximation characteristics) for No Filter or hardware filter.

## MP2110A Related Products

### Signal Quality Analyzer-R MP1900A

#### Support 400 GbE/800 GbE and PCIe Gen4/5. All-in-One Support for Evaluating Next-Generation NRZ/PAM4 Network Interfaces and High-Speed Serial Buses

- All-in-one support for both high-speed Ethernet and PCI Express interface tests
- Easily configured and easy-to-use all-in-one 64-GBaud PAM4 BER measurement system supporting FEC analysis
- Receiver tests are supported by the built-in Protocol Awareness PCIe Link Training and LTSSM analysis functions
- High-reproducibility measurements due to high waveform quality and high input sensitivity
- Supports true signal integrity analysis, such as bit error rate measurements, Jitter Tolerance tests, etc.

The MP1900A is a high-performance BERT with excellent expandability for supporting Physical layer evaluations of these high-speed interfaces. The all-in-one design is ideal for early stage R&D evaluations of all interfaces covering ext-generation Ethernet networks to bus interconnects.

### Optical Spectrum Analyzer MS9740B

600 nm to 1750 nm

#### Faster measurement speed shortens measurement time and improves production efficiency

- Faster measurement speed of <math><0.2 \text{ s}/5 \text{ nm}</math> reduces total analysis time for active optical devices
- Built-in applications for evaluating active optical devices
- Built-in Fast mode cuts measurement time by 50% for better production efficiency to predecessor MS9740A using 200 Hz or 1 kHz bandwidth
- Excellent cost performance
- >58 dB dynamic range (0.4 nm from peak wavelength)
- 30 pm minimum resolution
- Low power consumption (100 VA), light weight (15 kg max.)

The MS9740B reduces production costs by shortening active optical device evaluation times and supporting efficient analysis applications.
